Vertical Design

We imagined an empty room, and water flowing from the walls. The project aim was to meld discreetly, elegantly, with the simple architecture of the bare room. The result is Obliqua®: three different interpretations of vertical design: XL, L, and M, each available in a plain or backlit version.

ILLUMINATED Design

WHITE LED 6500°K

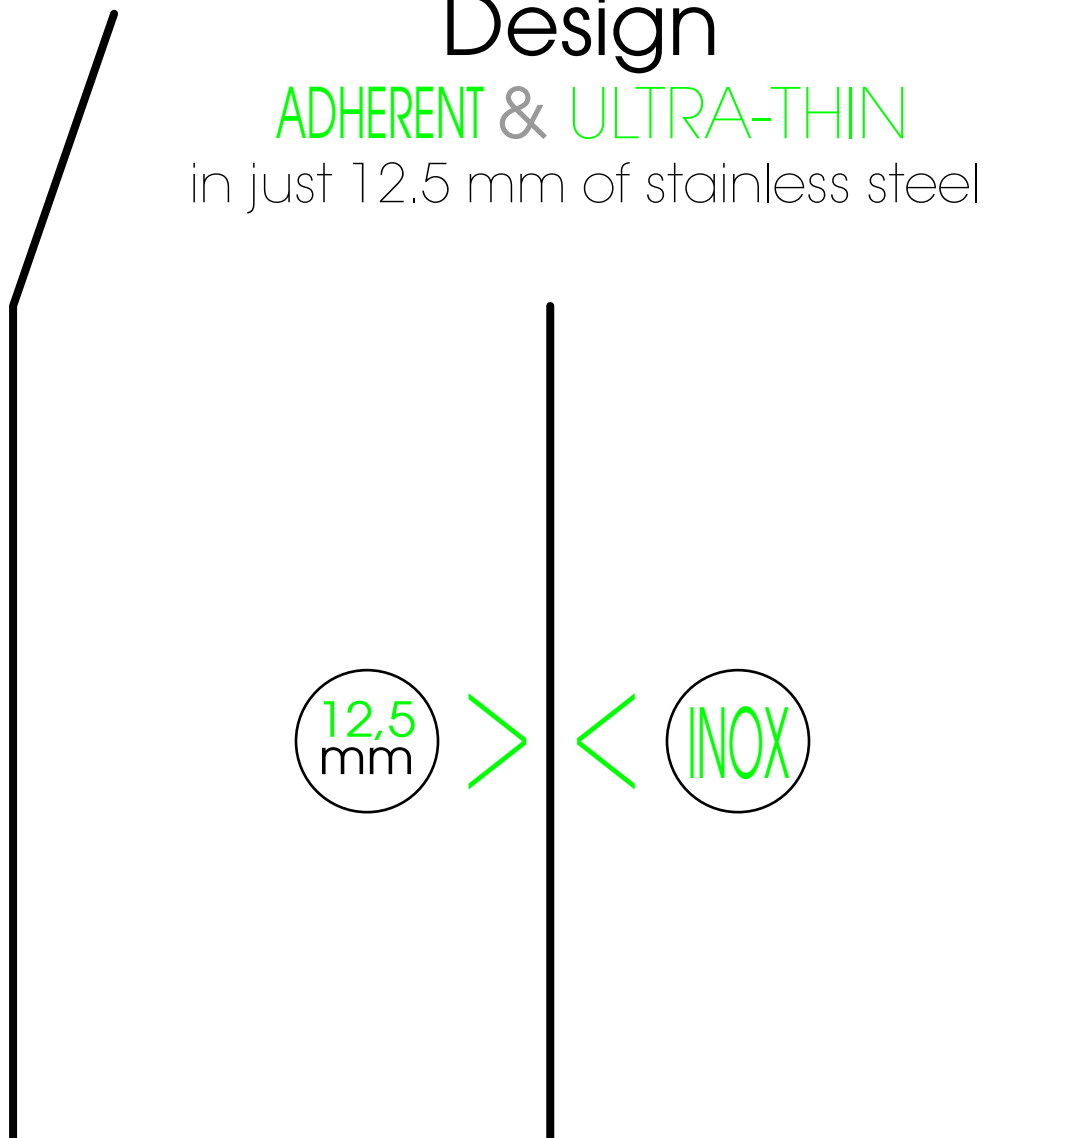

- Input: 220 Vac @50/60 Hz
- Output: 12Vdc (20W max)
- Protection Rating: IPX5 - IPX7
- Safety Certification Mark: CE
- Contacts protection rating: IPX7
- LED Strip Smd 3528 - 12Vdc
4,8W/m - 6500°K

The white light reflected on the wall lends intimacy and harmony to the personal care experience.

Design

ADHERENT & ULTRA-THIN

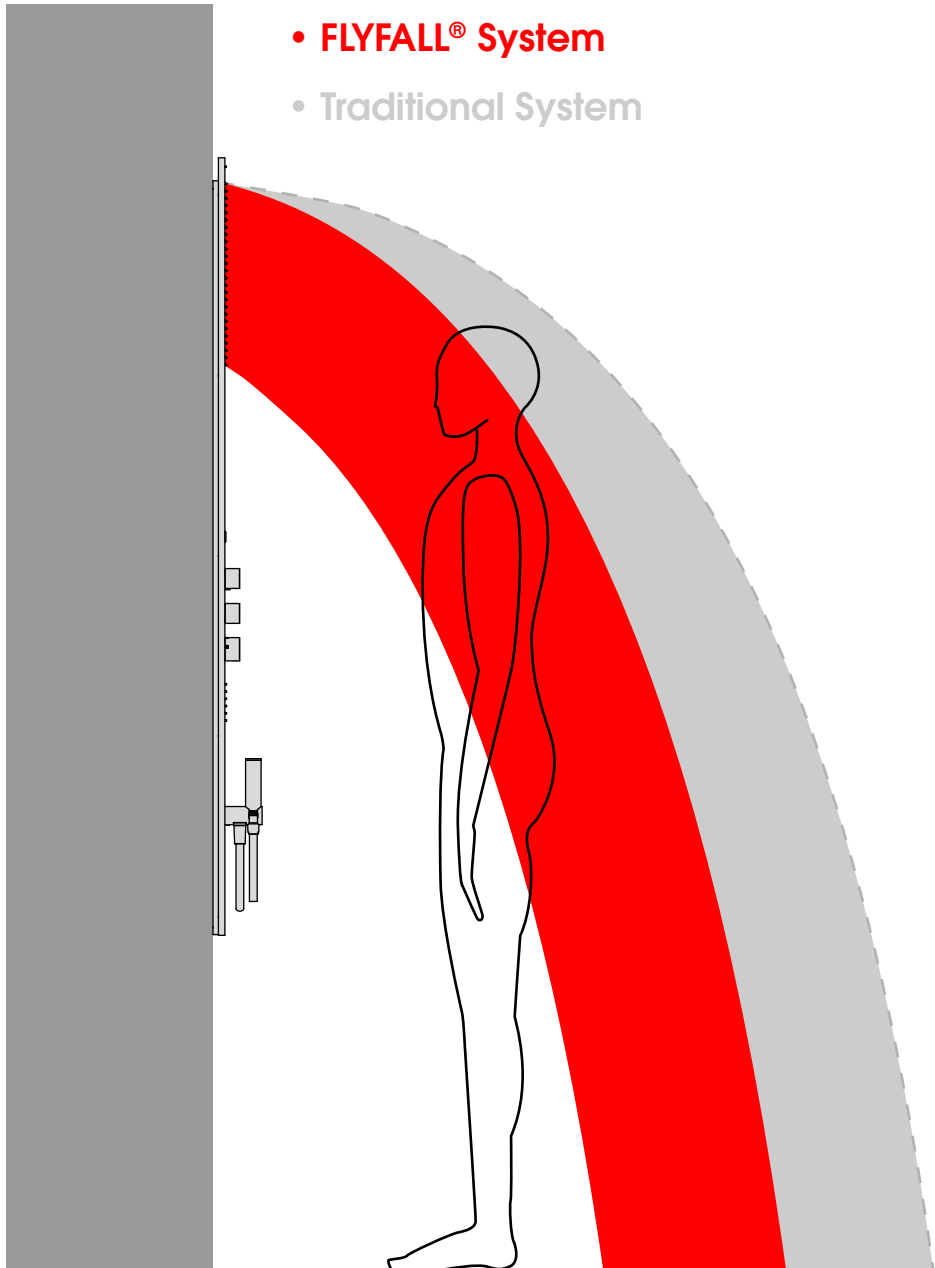

in just 12.5 mm of stainless steel

A product faithful to our idea
must present the thinnest possible profile;
all the circuits needed to allow water to perform
all of Obliqua's multiple functions in just 12.5 mm.

Design & INNOVATION

- **FLYFALL® System**
- Traditional System

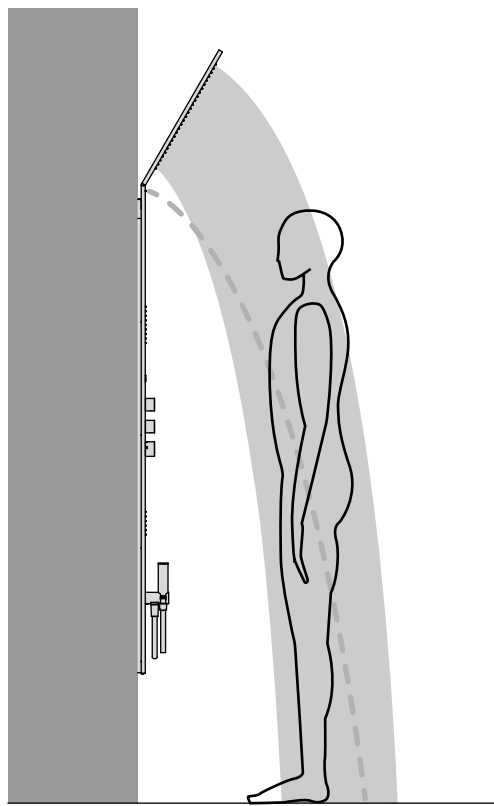

Imagining water flowing from the walls meant rising to new technological challenges: containing the water flow in very small channels, designing water circuits capable of defying the effect of gravity to permit uniform filling of the shower head, and, finally, how to keep the water “footprint” close to the wall so that the shower space wouldn’t overpower the room.

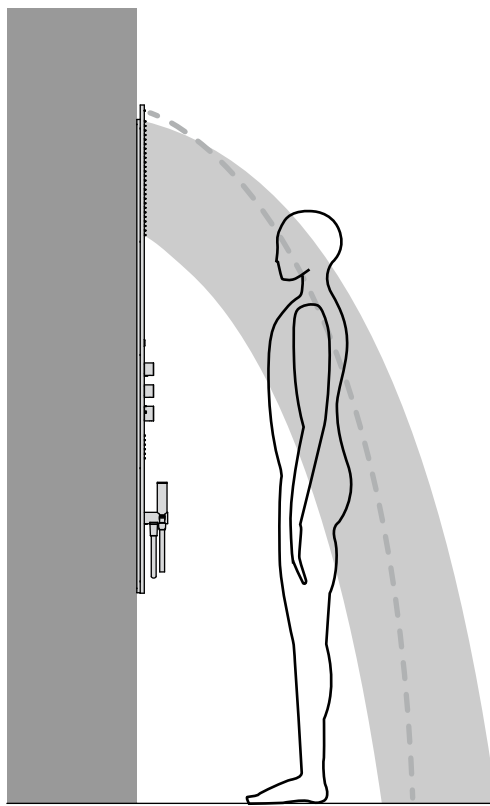

Flyfall®
makes it all possible.

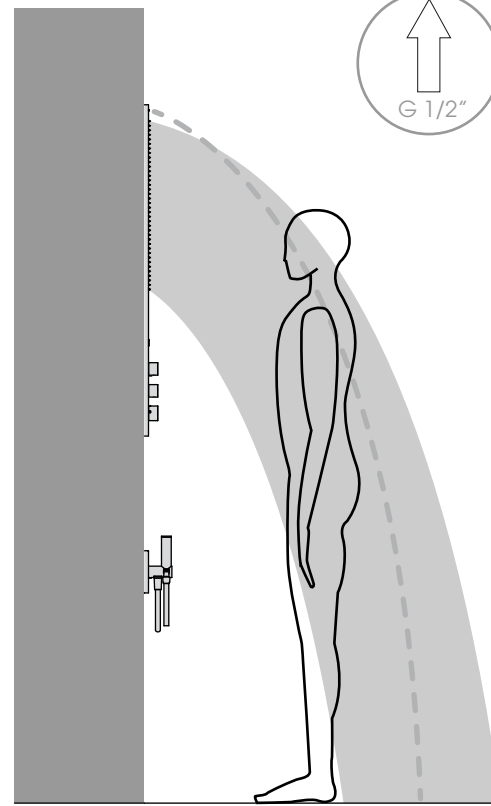

Design & PERFORMANCE

EASY SELECT INSTALL

EASY to select
one of the six available models.
Each, alone, completes the shower:
nothing else is needed.
Easy to install, since all that's
required is a built-in-box;
the external assembly hooks
onto the slider guides.

[INSTALLATION VIDEO >](#)

Design & COLOUR

All of the 6 models are available
in the shiny steel (CR)
and brushed steel (AD) finishes;
the three backlit versions
are also available in the
total white and total black
matte versions.
